

ExtraHub

The extramural operating system for schools — one inbox, one timetable, one revenue report.

For schools

Approve provider applications, publish a single trusted term schedule, and get an automatic revenue-share report each term. No more spreadsheets, no more WhatsApp threads.

For providers

One profile that works across every ExtraHub school. Upload docs once, submit term schedules, receive bookings via your channel of choice (WhatsApp, email, form, link).

What you get on day one

- Application inbox with documents, insurance, pricing and capacity in one view
- Term-schedule approvals (whole-term or per-slot) that publish to your school page
- Public school page with filters by category, age, day, price and featured
- Click analytics per activity and booking channel
- Automatic revenue-share: enrolment × price × your school's %
- CSV exports for your bursar; role-based access for admins, providers, parents

How it works

1. Set up your school	Create your branded page in under 60 seconds.
2. Invite providers	Share your application link. They apply once with all docs.
3. Approve & publish	One-click approve. Term schedule goes live for parents.
4. Report each term	Providers submit enrolment + price. We compute your share. Export CSV.

Security & data ownership

Every table is row-level-secured per school. Admins see only their school's applications, schedules, documents and financials. Provider documents live in a private bucket, accessed only via short-lived signed URLs. Your school's data stays your school's.
